

SCG Environmental and Energy Policy

With commitment to be a role model in Sustainable Development, SCG realizes the importance of the environment and energy as key drivers in sustainable growth of our business. Resource and energy utilization in activities across the entire supply chain could bring about significant impact to bear upon sustainability, as in SCG business philosophy.

SCG has therefore charted this Environmental and Energy Policy, in order to ensure efficiency and effectiveness wherever we operate. The Policy outlined herewith must be applied to all operations and when implementing any new project, modification project, due-diligence as well as mergers and acquisitions with the following:

1. Compliance with laws and regulations related to the environment and energy is deemed minimum standard, and conducting business in line with the SCG Sustainable Development Guidelines.
2. Implement Environmental and Energy Management System as part of business operation.
3. Identify Materiality issues and develop an Environmental and Energy Management Plan that is accompanied by key performance indicators.
4. Operate business by ensuring that performance is within the leadership realm, and to be role model in the conservation of environment and energy.
5. Set up monitoring and reporting system on environmental and energy performance following the SCG Environmental Data Collection and Reporting Guideline.
6. Educate and raise awareness on environmental and energy conservation among employees and suppliers.

To ensure that this Environmental and Energy Policy is translated into action and embedded in our organizational culture, all companies shall adapt this Policy to suit every business operation according to SCG Vision.
